Senior Software Developer | Vancouver, GMT-7 | gabrielnino@gmail.com | +1 672 33822 58 / [www.linkedin.com/in/luis-nino-developer](https://www.linkedin.com/in/luis-nino-developer)

## Professional Summary

Senior Software Developer with 18+ years designing .NET solutions and data migrations to the cloud. I have led automated tools deployed to 300 clients, saving 6 months of manual effort per pipeline and streamlining legacy processes in PySpark, Scala, and C#. Seeking to leverage my expertise in scalable architectures, Business Intelligence, and Data Engineering within a global team.

## Professional Experience

**Snowflake** — *Senior Software Developer*

Nov 2021 – Present

- Developed application in C#/.NET and Python to automatically convert PySpark and Scala code to Snowpark/optimized Scala, migrating 70% without intervention, deployed to 300 clients over three years and saving each up to 6 months of manual migration effort per pipeline.
- Architected and built a C#/.NET & Python application that automatically converts PySpark and Scala code to optimized Snowpark Scala, migrating 70% of pipelines without manual intervention and deploying to 300 clients.
- Led Agile (Scrum) ceremonies—sprint planning, daily stand-ups, reviews and retrospectives—ensuring on-time delivery of new features and rapid iteration based on stakeholder feedback.
- Designed and maintained Azure DevOps pipelines for CI/CD, automating build, test, and deployment stages; reduced manual deployment effort by 40% and accelerated release cycles by 30%.
- Partnered with data science teams to migrate machine-learning pipelines (built in PySpark) to Snowpark, validating compatibility with TensorFlow and PyTorch frameworks.
- Prototyped AI-assisted code-analysis features using Azure Machine Learning and OpenAI APIs, exploring LLM-driven suggestions for conversion optimizations.

**MAS Global** — *Senior Software Developer*

Jul 2021 – Nov 2021

- Designed and developed a SAFe-aligned prototype budgeting application with .NET Core, Angular, SQL Server/Entity Framework, and Azure; validated against 100 manual quotes, improving pricing accuracy by 40%.
- Collaborated in a cross-functional SAFe team—participating in PI planning, backlog refinement, and sprint demos—to align business goals with technical deliverables.
- Implemented end-to-end CI/CD workflows in Azure Pipelines, integrating automated unit and integration tests to ensure code quality and rapid rollbacks.

**Software One** — *Senior Software Developer*

Nov 2013 – Jul 2021

- Managed and resolved 300+ support tickets with a 3-day average resolution time; cleared 90% of backlog and maintained a 100% first-time fix rate.
- Worked in an Agile Scrum environment, partnering with QA and product teams to prioritize incidents and implement preventative monitoring.
- Introduced logging and alerting solutions (Application Insights, Log Analytics) that reduced recurring issues by 25%.

**El Tiempo Casa Editorial** — *Senior Software Development Engineer*

Jul 2011 – Dec 2013

- Developed and optimized job-search features using C#, ASP.NET WebForms, SOLR, Entity Framework, and WCF; increased job applications from 300 M to 400 M annually (33% growth).
- Tuned SOLR relevance and indexing strategies, collaborating with UX and analytics teams to refine search results and boost user satisfaction.
- Participated in two-week Scrum sprints, delivering new features and performance improvements on schedule.

**Software One** — *Senior Software Development Engineer*

Nov 2009 – Jul 2011

- Enhanced on-page SEO (meta tags, structured data, Google best practices) on [PaginasAmarillas.com](http://PaginasAmarillas.com), moving key pages from page 3 to page 1 for targeted keywords.
- Analyzed web analytics to identify high-impact content opportunities and implemented structured data markup to increase organic click-through rates by 50%.

**Stefanini** — *Senior Software Development Engineer*

Jul 2009 – Nov 2009

- Built a Windows Forms application in VB.NET with WCF integration for CISA's property-registration workflows, doubling daily throughput (150 → 300) and halving processing time.
- Collaborated with business analysts to gather requirements and deliver the prototype within a 3-month deadline.

**SONDA** — *Junior Software Development Engineer*

Feb 2008 – Jul 2009

- **Developed an accounts-receivable module using C#, ASP.NET WebForms, WCF, SQL Server, and TFS; streamlined billing workflows and increased monthly recoveries from 800 M to 960 M.**
- **Wrote unit and integration tests to ensure data integrity, reducing post-release defects by 35%.**

**AXESNET S.A.** — *Junior Software Development Engineer*

Jan 2007 – Feb 2008

- Designed and implemented a C#/.NET payment-gateway prototype processing 13 transactions per second.
- Partnered with DBAs to model a high-performance SQL schema, supporting rapid transaction throughput.

## Technical Skills

- Languages: C# (Advanced), Visual Basic (Advanced), SQL (Advanced), Python (Intermediate), JavaScript/TypeScript (Intermediate)
- Frameworks & Tools: .NET Core, ASP.NET WebForms & MVC, Entity Framework, LINQ, Angular, React, Blazor, WCF, SOLR, TFS, GitHub, Azure DevOps, Snowflake, Spark, Scala
- Practices: Agile (Scrum, SAgile), SOLID Principles, Design Patterns, TDD, OOD, DevOps & CI/CD
- Cloud Platforms: Azure (Functions, DevOps, AI Services, Cognitive Services)
- AI/ML: TensorFlow, PyTorch, Azure Machine Learning, OpenAI APIs
- Languages Spoken: English (Intermediate), Spanish (Native)

## Education

**B.Sc. in Systems Engineering**

Universidad Distrital Francisco José de Caldas, Bogotá, Colombia

Graduated July 2009
